

Deliverable D7.2 Summary

This deliverable D7.2 – Pilots demonstration is focused on the demonstration of all Pilots run and tested during NEWTON project. Demonstrations of the Pilots within D7.2 include the following steps:

- Description of each Pilot where the detailed general information regarding its preparation and set up are listed in the tables following Section 3 – Pilots demonstrations of this document,
- Examples of description of technologies used for each Pilot following Section 3 – Pilots demonstrations including the short demo presentation listed in the Appendix.

D7.2 is the result of the work on *Task 7.2/3 Pilots (Small and Large-scale) Definition and Implementation, Large-Scale Pilots coordination* that includes several activities as follows:

- o Planning of each Pilot,
- o Set-up of the infrastructure and all necessary stuff needed for the successful commencement and running of each Pilot,
- o Training of all the participants (students, teachers, other members) how to use and access their Pilot,
- o Testing of the educational content upon the used technologies and the use of the NEWTELP platform by students and teachers (participants) at the targeted schools,
- o Providing the support during the Pilot running to all students and teachers participating in Pilot by pilot support from Consortium to ensure the smooth testing.

Within this deliverable, we mainly focus on the presentation of all the technologies used per each Pilot by its description, for Small-scale Pilots and Large-scale Pilots as well as to show the technologies on the sample of screenshots provided in the Appendix under the section 5 as examples for some NEWTON project pilots.

The outputs from the evaluation resulted from the feedback upon the whole NEWTON platform provided from all the participants participated in testing are not the scope of this document. The usability of technologies as well as the whole NEWTON platform will be fully described in deliverable D7.3 – Usability and Performance evaluation in which all the gathered data from Pilots will be assessed and the result upon the evaluation from Pilots provided.
