

# Deliverable D7.3 Summary

Deliverable **D. 7.3** provides an overview of the Performance and Usability Evaluation of all Large-Scale pilots, which will contain the outcomes of Tasks 7.2/7.3, 7.4 and 7.5.

The *Usability Evaluation* includes several activities, described as follows:

- Planning of each pilot;
- Set-up of the infrastructure and all necessary activities needed for the successful commencement and running of each pilot;
- Training of all pilot participants (students, teachers, other members) on how to use and access pilot material;
- Testing of the educational content upon the used technologies and the use of the NEWTELP platform by participants (students and teachers) at the targeted schools;
- Providing support during pilot sessions to all participants to ensure smooth running of pilots;
- Implementing various scenarios covering the different NEWTON technologies along with the platform;
- Defining criteria and methodology for technical evaluation;
- Collecting relevant information that provides feedback about the usability of NEWTON technologies .

In this deliverable, we mainly focus on presenting performance evaluation reports for the NEWTON Project Fab Lab and NEWTELP platforms along with the usability evaluation reports for all NEWTON Large-Scale Pilots. The outputs from the evaluation related to usability of technologies, resulted from the feedback upon the whole NEWTON platform and provided by all participants are the scope of this document, in which all the gathered data from Large-Scale Pilots has been assessed and presented.
